IMCORP Celebrates 17 Years of Setting the Standard for Power Cable Reliability

IMCORP announces its 17th anniversary. From University of Connecticut startup to industry leader in power cable assessment, IMCORP's unprecedented growth has set the standard in the power cable reliability industry.

MANCHESTER, CT 8/29/2012: IMCORP, the global provider of the Factory GradeSM test for power cable systems, is proudly celebrating 17 years of successful business.

Founded in 1995 as a startup out of the University of Connecticut, IMCORP has developed into the leading provider of power cable reliability services. Unmatched diagnostic performance has fueled an unprecedented growth rate even through the economic downturn. IMCORP has expanded its reliability services to clients in 49 U.S. states and 13 countries. Currently the leading provider of wind farm collector system commissioning across North America, IMCORP has successfully expanded from its renewable energy roots into utility power cable life cycle management and critical facility industries.

All IMCORP employees who were not working in the field celebrated with the founder of the company. Dr. Matthew Mashikian led the festivities by cutting the cake at IMCORP's home office in Manchester, CT. Dr. Mashikian expressed his gratitude by saying, "When I started this company 17 years ago, I had no idea what was to come. I am so grateful for all of those who've helped develop this technology, that we've been able to hire dedicated and professional employees, and that our clients have been open to new ideas in cable asset management. I know without all of them, our growth would not have been possible."

IMCORP looks forward to the upcoming year, with thousands more miles of cable to test. Meeting an increasing client base will have IMCORP expanding into a second office space and building several new Mobile Diagnostic Units. IMCORP's impact on the local economy, global ecology, and quality of life for all those who depend on power is a source of pride for its employees.

About IMCORP:

IMCORP is the technology leader in underground power cable reliability. Our diagnostic technology locates existing cable system defects and predicts future cable reliability. This performance-driven solution provides the most effective and efficient means to determine the reliability of new or aged cable systems. IMCORP's Factory GradeSM test, bringing the cable and accessory manufacturers quality standards to the field, has enabled rapid growth across industries and around the world. From single phase 5kV to 3 phase 500kV, IMCORP is setting the standard in cable system reliability.
